1970 Cougar Convertible, new master cylinder and water pump, and power steering module kit all not installed. New gas tank, fuel pump, battery, many other new components like the molding kit are in the trunk. Windows are complete but not installed yet. New floor pan. Doors are really nice and installed correctly, open and close like new. Hood has Tach and working hood scoop, aligns perfectly. 351 Cleveland that runs great and doesn't sound stock. Downside: was an automatic and was converted to standard. I have original automatic center console with shifter and I would take it back to Automatic if I keep it.
